/competent cells E. coli DNA ligase after digestion of competent cells E. coli Top10f" by alectroporation method. After analyzing and sequencing about 2,000 ~ 3,000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer. The PCR products were used as template for synthesis of biotinylated single stranded RNA by in vitro transcription resion when the synthesis of biotinylated single stranded RNA by in vitro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               transcription reaction. The synthesized RNA probes were hybridized with antisense single stranded cDNAs prepared from original liberary and incubated with aridin-gel. After removing DNA-RNA hybrids by centrifuge, the subtracted cDNA libraries were constructed by transformation of the remaining DNA into competent cells E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 TGAGATTCATCTGTGTGAAATATGAGTTGGCGAGGAAGATCGACCTATTATTGGCCTAGA 120

Library is oligo-dT primed and directionally cloned
Denatured RNA was size fractionated on a 1% agarose gel.
First strand cNNA synthesis was primed with oligo-dT
Primer containing a Not I site. Double strand cDNA was
size selected according tomRNA size fraction, ligated with
EcoR I adaptor, digested with Not I and then cloned
